

Final Web Application

Name: Zarana Bhalala

Student ID: 31542603

Project feature:

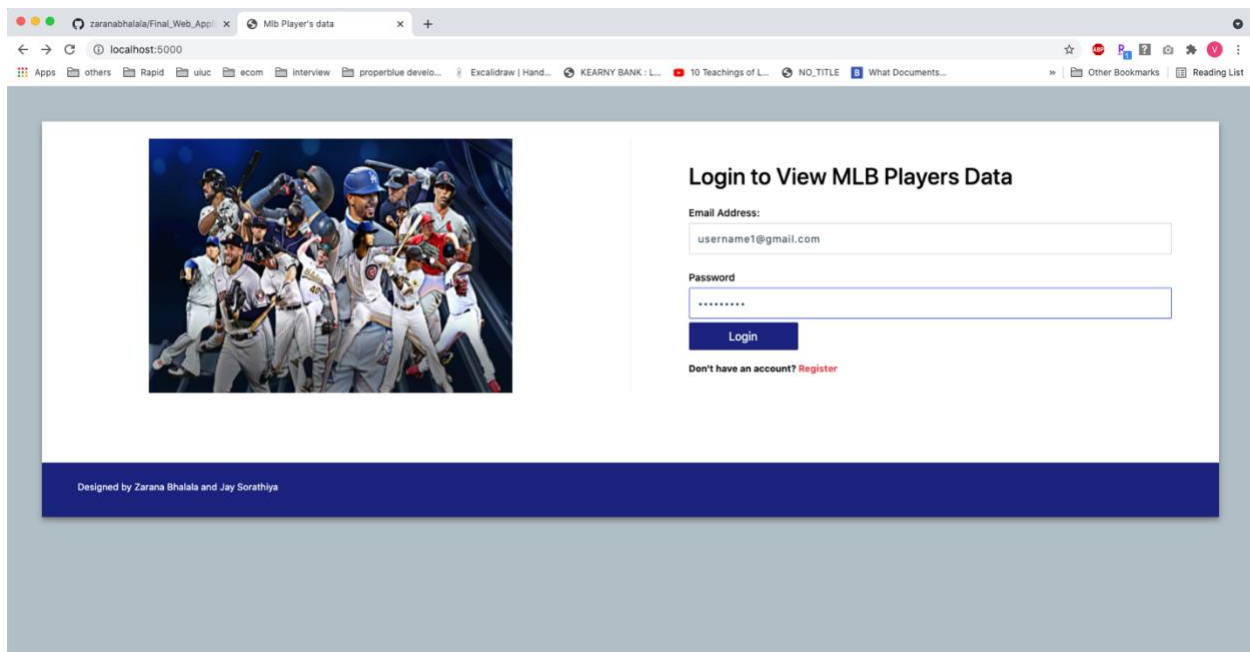

Created a login and registration process that includes email verification.

1. Login Process - Log into your account by entering your email address and password.

Below email address and password used to verify login and it will redirect to the MLB Player's data.

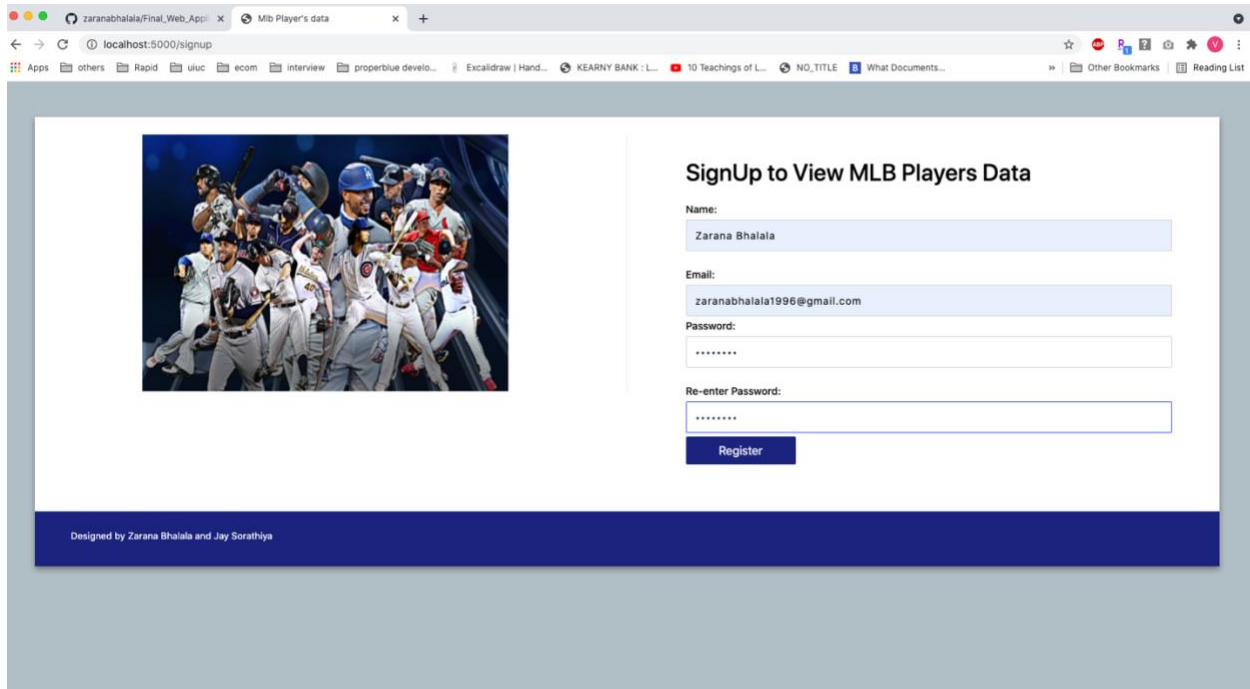

Email Address: username1@gmail.com

Password: password1

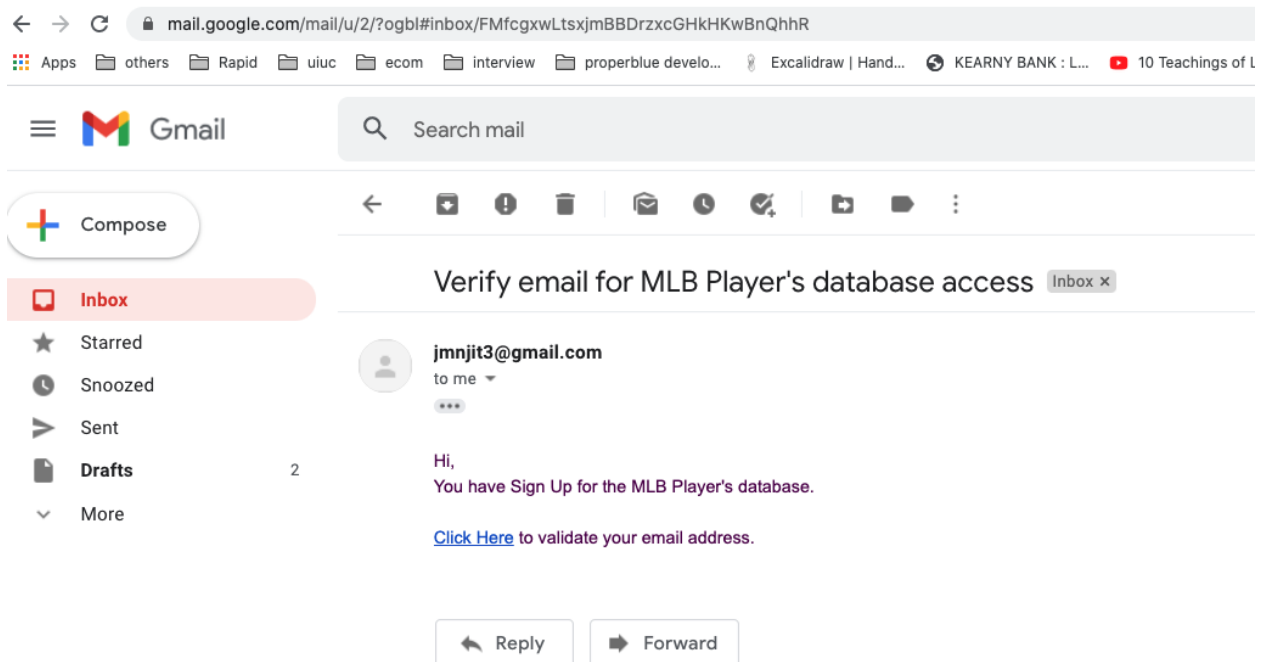

2. Registration Process - Create new account by clicking "Register" button and submit your details like name, email address and password.

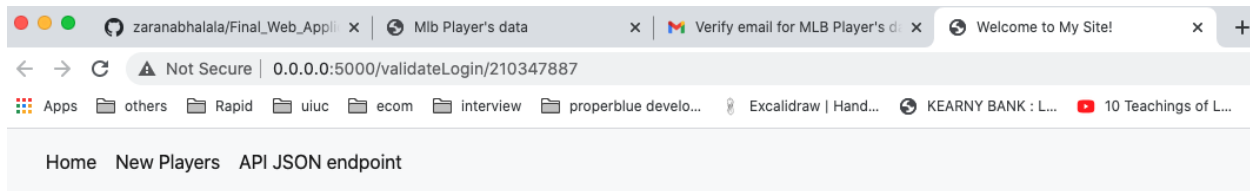

Also, added Re-enter password to check password are matches or not.

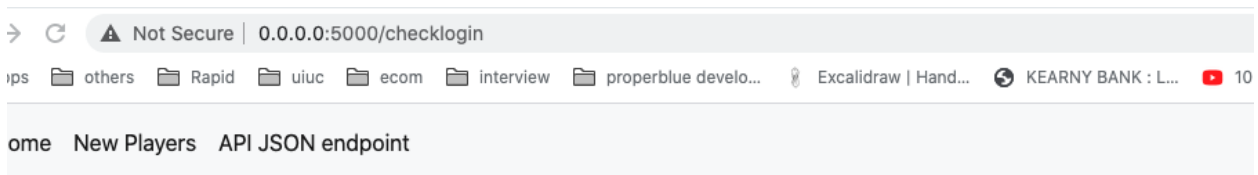

3. Upon a registration, user will receive an Email with attached link to verify their login.

4. After clicking on “Click Here” link then it will redirect to the email verified successfully page. After click on “Click Here to Proceed” it will redirect to login page.

5. If user enters incorrect email address or password in Login page then it will redirect to the Please check your email id/password and try again error message page. After click on “Click Here to Proceed” it will redirect to login page.

6. If user enters incorrect email address in Login page then it will redirect to the User name not found error message page. After click on “Click Here to Proceed” it will redirect to signup page.

API JSON endpoint

404 - User name not found

Status Code: 404

Message: User name not found

[Click Here to Proceed](#)

7. If user register with same email address again in Signup page then it will redirect to the Username already exists error message page. After click on “Click Here to Proceed” it will redirect to login page.
